                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DB

Interacts with the secy/secE subunits. SecA has a central role in coupling the hydrolysis of ATP to the transfer of pre-secretory periplasmic and outer membrane proteins across the membrane.

In SUBUNIT: Part of the prokaryotic protein translocation apparatus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GYRA OR SLR0417.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA rings, including catenanes and knotted rings.
CATALYTIC ACTIVITY: AIP-dependent breakage, passage and rejoining of double-stranded DNA.
SUBUNIT: Made up of two chains. The A chain is responsible for DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: DNA gyrase negatively supercoils closed circular double-
stranded DNA in an ATP-dependent manner and also catalyzes the
interconversion of other topological isomers of double-stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           breakage and rejoining; the B chain catalyzes ATP enzyme forms an A2B2 tetramer.
                                                                                                                                                                                          494
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SYNY3

"Multiple functions of Furtlp-mediated protein O-mannos
fungal pathogen Candida albicans.";
J. Biol. Chem. 273:20837-20846(1988).
-i- FUNCTION: TRANSFERS MANNOSE FROM DOL-P-MANNOSE TO
RESIDUES ON PROTEINS.
-i- CATALYTIC ACTIVITY: Dolichyl phosphate D-mannose +
dolichyl phosphate + O-D-mannosyl-protein.
-i- PATHWAY: Glycosylation.
                                                                                                                                                                                                                                                                                                                                                                                                   Pfam; PF02815; MIR; 3. Also described are: (1) an CC immunogen (II) for treating allergy comprising (I); (2) a vaccine (III) CC for treating allergies comprising (II); (3) a ligand (IV) capable of CC recognising EI; (4) a pharmaceutical composition (PC) comprising (IV); (6) an immunogen (IIa) capable of being recognised by (IV); (6) an immunogen (IIa) comprising (Ia); and (7) producing (III) by producing (II). (I) can CC have antiallergic and immunosuppressive activities, and can be used as a vaccine and histamine release inhibitor. (I), (II) and (III) are useful in medicine and in the manufacture of medicaments for treating and CC preventing allergies. (IV) is useful for identifying mimotopes of P1, in CC medicine and also in manufacturing medicaments for treating allergies. (IV) is useful in diagnostics and in the affinity purification of circulating anti-IgE antibodies from blood. (I), (III) and PC are useful for treating anti-IgE antibodies from blood. (I), (III) and PC are useful corrections are useful in diagnosing atopy. AAB25907 to AAB2609 represent present expective acceptable which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

Claim 9; Page 37; 53pp; English

The present invention

present invention describes an immunogen (I) and a carrier (Ib) derived from protein D o

I) comprising a of Haemophilus

peptide influenzae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   or its fragment. Also described are: (1) a vaccine comprising (I), and a excipient; (2) preparation of (I), comprising conjugating a peptide to protein D or its fragment; and (3) preparation of a vaccine of (1), comprising formulating (I) with an excipient. (I) has cytostatic, comprising formulating (I) with an excipient. (I) has cytostatic, antiallergic, nootropic, neuroprotective and protozoacide activities. (I and the vaccine are useful for the manufacture of a medicament for preventing and treating infectious diseases such as malaria or chronic disease such as cancer, Alzheimer's disease or allergy in a patient. Unlike prior art immunogens, (I) induces high levels of antipeptide immune responses while inducing a moderate humoral response against the
                                                                                             The present invention relates to a composition comprising allergy peptides linked by an inert carrier. The allergy peptides are derived from Immunoglobulin E (ISB) or ISE receptor. The present peptide is one such peptide from ISE. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response
                                                                                                                                                                                                                                                           New vaccine comprising allergy peptides linked by an inert carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    carrier. The present sequence represents a specifically claimed immunoglobulin E (IgE) epitope immunogenic peptide sequence, whused in an immunogen of the present invention

                                                                                                                                                                The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the Cepsilon2 (Cepsilon3 or Cepsilon4 cregions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an iffcom or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human from the Cepsilon3/Cepsilon4 region of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             뮍

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to conjugates suitable for use in vaccine where the conjugate comprises a disulphide bridge cyclised peptide and immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from hum immunoglobulin E (IGE) suitable to be cyclised and used in the inventic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a method of treating chronic hepatitis comprising administering to a patient a T cell-stimulating amount of a vaccine comprising immunogenic particles dissolved or dispersed in a diluent, where the immunogenic particles consists of recombinant hepatitis B core
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating chronic hepatitis B infection by administering a T cell-stimulating vaccine containing immunogenic particles having recombinant carboxy-terminal truncated hepatitis B core (HBc) chimeric protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (HBc) chimeric protein molecules, and maintaining the patient to induce 1 cells activated against HBc. The methods and compositions of the present invention are useful for treating chromic hepatitis B infection. This is the amino acid sequence of a chimeric hepatitis B virus related B-cell epitope useful for expression within the HBV chimer at the N-terminus, within the immunoigenic loop and/or at the C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21-FEB-2002; 2002US-00080299.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       THE PRICE OF SECTION O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC surface exposed group/epitope (EI) of C-epsilon-2 domain (D) of cimmunoglobulin E (IgE), or its mimotope. Also described are: (1) and CC immunogen (II) for treating allergy comprising (I); (2) a vaccine (III) CC for treating allergies comprising (I); (3) a ligand (IV) capable of CC recognising E1; (4) a pharmaceutical composition (PC) comprising (IV); (6) a peptide (Ia) capable of being recognised by (IV); (6) an immunogen (CC (Ia) comprising (Ia); and (7) producing (III) by producing (III), (1) can have antiallergic and immunosuppressive activities, and can be used as a CC vaccine and histamine release inhibitor. (I); (II) and (III) are useful CC in medicine and also in manufacture of medicaments for treating and CC preventing allergies. (IV) is useful for identifying mimotopes of P1, in medicine and also in manufacturing medicaments for treating allergies. (CC (I) is useful in diagnostics and in the affinity purification of CC circulating anti-IgE antibodies from blood. (I), (III) and PC are useful CC is also useful in diagnosing atopy. ABS2507 to ABS2609 represent CC invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The invention describes peptides derived from or mimotopes of the Cepsilon2, Cepsilon3 or Cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient. ANI16632-ANU16913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human
        Conjugate for use in vaccine for treatment of allergy, comprises disulfide bridge cyclized peptide and immunogenic carrier.

                                                                                                                                                                           The invention describes a method of treating chronic hepatitis comprising administering to a patient a T cell-stimulating amount of a vaccine comprising immunogenic particles dissolved or dispersed in a diluent, where the immunogenic particles consists of recombinant hepatitis B core (HBC) chimeric protein molecules, and maintaining the patient to induce T cells activated against HBC. The methods and compositions of the present
                                                          invention are useful for treating chromic hepatitis B infection. This the amino acid sequence of a chimeric hepatitis B virus related B-cell epitope useful for expression within the HBV chimer at the N-terminus, within the immunoigenic loop and/or at the C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating chronic hepatitis B infection by administering a T cell-stimulating vaccine containing immunogenic particles having recombinant carboxy-terminal truncated hepatitis B core (HBc) chimeric protein
                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID NO 136; 111pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                            The present invention describes a peptide (I) comprising an isolated surface exposed group/epitope (EI) of C-epsilon-2 domain (D) of cimmunoglobulin E (19E), or its mimotope. Also described are: (1) an immunogen (II) for treating allergy comprising (I); (2) a vaccine (III) conversing allergy comprising (II); (3) a ligand (IV) capable of recognising EI; (4) a pharmaceutical composition (PC) comprising (IV); (5) a peptide (Ia) capable of being recognised by (IV); (6) an immunogen (IIa) comprising (Ia); and (7) producing (III) by producing (II). (I) can have antiallergic and immunosuppressive activities, and can be used as a converse and histamine release inhibitor. (I), (II) and (III) are useful in medicine and also in manufacture of medicaments for treating and conversing antipodies (IV) is useful for identifying mimotopes of P1, in medicine and also in manufacturing medicaments for treating allergies. (IV) is useful for identifying mimotopes of P1, in suseful in diagnostics and in the affinity purification of circulating anti-IQE antibodies from blood. (I), (III) and PC are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

The present invention describes a peptide (I) comprising an isolated surface exposed group/epitope (EI) of C-epsilon-2 domain (D) of immunoglobulin E (IGB), or its mimotope. Also described are: (1) an immunogen (II) for treating allergy comprising (I); (2) a vaccine (III) for treating allergy comprising (I); (3) a ligand (IV) capable of recognising EI; (4) a pharmaceutical composition (PC) comprising (IV); (5) a peptide (Ia) capable of being recognised by (IV); (6) an immunogen (IIa) comprising (Ia); and (7) producing (III) by producing (II). (I) can have antiallergic and immunosuppressive activities, and can be used as a vaccine and histamine release inhibitor. (I), (II) and (III) are useful in medicine and in the manufacture of medicaments for treating and preventing allergies. (IV) is useful for identifying mimotopes of P1, in

(I), (II) and (III) are useful in medicine and in the manufacture of medicaments for treating and preventing allergies. (IV) is useful for identifying mimotopes of PI, in medicine and also in manufacturing medicaments for treating allergies. (IV) is useful in diagnostics and in the affinity purification of circulating anti-1gE antibodies from blood. (I), (III) and PC are useful for treating apatient susceptible to or suffering from allergies. (IV) is also useful in diagnosing atopy. AABE5907 to AABE6099 represent repetitive sequences which are used in the exemplification of the present
                                                                                                                                                                             Immunogens and vaccine comprising the immunogen useful for prevent: treating infectious diseases e.g. malaria and chronic disease e.g. cancer, comprises peptide and carrier from protein D of influenzae
                                                                                                                                                                                                                                                                                                                                                              Coste

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein D or its fragment; and (3) preparation of a vaccine of (1), comprising formulating (I) with an excipient. (I) has cytostatic, antiallergic, nootropic, neuroprotective and protozoacide activities. (I) and the vaccine are useful for the manufacture of a medicament for preventing and treating infectious diseases such as malaria or chronic disease such as cancer, Alzheimer's disease or allergy in a patient. Unlike prior art immunogens, (I) induces high levels of antipeptide immune responses while inducing a moderate humoral response against the carrier. The present sequence represents a specifically claimed mimotope peptide sequence, which can be used in an immunogen of the present
                                                                                                                                                                       The present invention relates to a composition comprising allergy peptides linked by an inert carrier. The allergy peptides are derived from Immunoglobulin E (IGE) or IGE receptor. The present peptide is one such peptide from IGE. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response
                                                                                                                                                                                                                                                                                                                                                                     New vaccine comprising allergy peptides linked by an inert carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2001-091150/10.
